## Introduction

Vericom's Fiber Cable Tray System is a comprehensive raceway solution for data center, enterprise, central office, and mobile switching center applications. Designed to route and protect fiber optic and high-performance copper cabling to and from network cabinets, distribution frames, and other terminal devices, our system includes an extensive portfolio of channels, transitional fittings, drops, and support structures that provide the flexibility and configurability to fit any installation environment. And with tool-free assembly of all channel sections and transitional fittings, the Vericom Fiber Cable Tray System reduces installation and maintenance time, which in turn reduces the total cost of ownership.

## KEY FEATURES:

- Available in 5", 10", and 15" channel widths
- Minimum 2" bend radius maintained throughout the system to prevent excessive cable bends that result in signal loss
- All plastic components are made from lightweight UL 94 V-0 flame rated material
- Conforms to UL 2024 Cable Routing Assemblies and Communications Raceways (E515097)
- Tool-free design makes assembly and installation fast and easy
